## **Test PDFs By Converting Them To HTML**

How to download a PDF file, convert it to HTML, and load back to Cypress browser for more testing

Let's take Filip Hric's <u>Testing a PDF file with Cypress</u> and see if we can play with it a little. In his example, Filip downloads a PDF and reads it as text using <u>pdf-parse</u> NPM utility. Then test then checks if the PDF text contains a sentence we expect it to have.

cypress/e2e/final.cy.ts

```
1it('downloads a simple PDF file', () => {
2  cy.visit('/')
3  cy.contains('simple.pdf').click()
4  // wait for the file to be downloaded
5  cy.readFile('cypress/downloads/simple.pdf', 'utf8')
6  cy.task('readPdf', 'cypress/downloads/simple.pdf')
7  // yields the text from the PDF file
8  .should('contain', 'Hello darkness my old friend')
9})
```
